OCAL FINANCIAL

SEO AND SEARCH PLAN

NOVEMBER 4, 2026 · INVESTORS.OCAL.CA · FOR CQ AND HAS

RANK FIRST FOR OCAL'S OWN NAME, SHOW UP FOR THE CATEGORY, BE READ CORRECTLY BY DATA VENDORS AND AI ASSISTANTS

On 23 October 2026 OCAL's own site did not appear in the top nine results for any of nine brand queries ('OCAL Financial', 'OCAL stock', 'OCAL TSXV', 'OCAL share price' and five more). Newsfile copies, Stockwatch, Yahoo, Investing.com (still under a Ronin URL) and auto-written stock pages hold those positions, and three of the queries are polluted by an Indian company called UCAL. The reasons are fixable: the old investor page served crawlers 1,300 characters of generic text, no page carried the brand string 'TSXV: OCAL' in its title, no structured data named the ticker, and the data vendors describe a different company. The new site fixes the on-site half on day one. This plan covers the rest. Full evidence and sources: research file C, Parts 2a to 2e.

1. THE FIVE MOVES THAT MATTER MOST

1. **Real HTML, real titles, real data.** Every page of the new site is static HTML with a unique title carrying 'TSXV: OCAL', a unique description, a self-referencing canonical, Corporation and WebSite JSON-LD with the ticker, ISIN, CUSIP, LEI and sameAs links, BreadcrumbList on every page, FAQPage on the FAQ, NewsArticle on every release, Event on the events page. The old page had none of this. Done in the build; CQ keeps it intact.
2. **Fix the data vendors at the source.** S&P Capital IQ feeds Yahoo, Simply Wall St and probably Investing.com, Stockhouse and Weiss; one correction there repairs most of the web. Then TMX Money (which shows no description at all), the Newsfile company page (OCAL controls it), Morningstar, Google Finance. Document 02, section 2 has the approved text and the routes.
3. **Build the entity layer.** The /facts/ page states the same facts as the schema in plain text; LinkedIn, Crunchbase and later Wikidata carry the same description; the LEI record's address is aligned. This is what Google's knowledge panel and the AI answer engines read.
4. **Own the exact brand string and push it into every release.** 'OCAL Financial (TSXV: OCAL)' in every title tag and H1; every news release ends with the investor URL so the wires, Yahoo and Stockhouse link to the page we want to rank; the consumer site links to investors.ocal.ca from its navigation and footer.
5. **Fast, honest discovery.** Sitemap with true lastmod, a Google News sitemap for releases, RSS, IndexNow for Bing, Search Console and Bing Webmaster Tools verified, a server-rendered

latest-news block on the home so Googlebot finds new releases from a page it already visits. No Indexing API (not permitted for releases), no tricks.

2. THE QUERIES TO OWN, AND WHO HOLDS THEM TODAY

QUERY	TOP RESULTS ON 23 OCT 2026	WHAT IT TAKES
OCAL Financial	Newsfile release copies, Newsfile company page, Webull, Kalkine, Weiss	Home page title 'OCAL Financial (TSXV: OCAL) Investor Relations'; Corporation schema; links from every release and the consumer site; vendor descriptions fixed
OCAL stock	Investing.com (Ronin URL), Yahoo OCAL.V, UCAL (India), Wealth Awesome	Stock page title 'OCAL stock | TSXV: OCAL share price...'; live chart; capitalization table; Yahoo and Investing.com profiles corrected
OCAL TSXV; TSXV:OCAL	Stockwatch (Ronin-era items), Mining Stock Education copies of the LOI	Ticker in every title; TMX Money description; Stockwatch URL field; new releases replace Ronin-era items over time
OCAL share price	Three UCAL pages, Wealth Awesome	Stock page; TradingView and TMX links; Yahoo profile; time
OCAL Financial investor relations	Newsfile, Yahoo, Stockwatch; the old IR page at position 10	Home page and site name; redirects from the old URL; Search Console
OCAL Financial news; OCAL Financial stock; JC3 Frankfurt	Wire copies; Yahoo JC3.F	News index and per-release pages; Frankfurt listing on the Stock page and the facts page
Category: asset-light car dealer stock; online car dealership stock Canada; used car financing company TSXV; Canadian Carvana stock; TSXV fintech auto finance stock	Generic articles, Clutch and Canada Drives coverage, Carvana pages	Why OCAL and How it works pages carry these phrases naturally; a later explainer page per theme ('What an asset-light car dealer is', 'The Canadian online car dealers compared') written as disclosure-safe editorial through the Lawson and CIRO path

Tracker: record the top five for each query, logged out on google.ca, at go-live and on days 30, 60 and 90 (document 02, section 3).

3. TECHNICAL PATTERN (BUILT; CQ MAINTAINS)

ELEMENT	STANDARD
URLs	One root, flat second level, per-release pages /news/YYYY-MM-DD-slug/, lowercase, hyphens, trailing slash, no query strings; permanent once published; 301 for every change
Titles and descriptions	Document 01, section 3. Under 60 and 155 characters; ticker in every title; release description is the first sentence after the dateline

Canonical	Absolute, self-referencing, on every page; never cross-domain to the wire
Structured data	One @graph per page: Corporation (@id #org), WebSite, WebPage, BreadcrumbList; plus FAQPage, NewsArticle, Event, Person where the page warrants; must match visible text
Sitemaps	sitemap.xml with lastmod; news-sitemap.xml with releases from the last two days only; feed.xml RSS; all referenced in robots.txt and submitted
robots.txt	Allow all, including search-grounding AI crawlers (OAI-SearchBot, PerplexityBot); training crawlers (GPTBot, Google-Extended) allowed unless Matthew decides otherwise
404	Real 404 status with the built 404 page; no soft 404s
Performance	LCP 2.5 s or less, INP 200 ms or less, CLS 0.1 or less at the 75th percentile on mobile; TradingView loads in fixed-height boxes; images WebP with width and height; two font weights
Images	Alt text describes the content and names OCAL where it adds meaning ('OCAL Financial (TSXV: OCAL) share price chart'); decorative images alt empty
Language	en-CA only; no hreflang until a French section exists; never machine-translate disclosure

4. GETTING A RELEASE INDEXED QUICKLY

METHOD	VERDICT
Server-rendered latest-news block on the investor home and a link from the consumer home footer	Do it. The strongest practical lever: Googlebot revisits the home often and follows the link.
XML sitemap with accurate lastmod; news sitemap	Do it. Necessary, not fast on its own.
Search Console URL inspection, Request indexing	Do it for each release; a handful a month; repeated requests do not help.
IndexNow	Do it. Bing, Yandex and others index within hours; Google does not participate.
Google Indexing API	Do not. Permitted only for job postings and live-stream pages; misuse can revoke access.
Google Publisher Center	Not a route for a company newsroom.
The wire (Newsfile)	The real route to Yahoo Finance, Google News and the aggregators; the 22 October release reached TMX Money, Stockhouse, MarketScreener and TipRanks within two minutes.

Realistic expectation: an OCAL release page is crawled within hours to a few days; Bing within hours via IndexNow; wire pages are indexed first because the wires have crawl priority. The release page wins over time because it is the permanent, linked, structured version.

5. AI ANSWER ENGINES

- **Google AI Overviews and AI Mode.** No special markup or file is required; pages must be indexed and snippet-eligible, with important content in text form and structured data matching visible text. The facts page, the FAQ, the Stock page and the How it works page are written as the direct answers.
- **ChatGPT, Perplexity, Gemini.** They cite pages they can fetch and prefer facts stated plainly and consistently across sources. Static HTML, one description everywhere, corrected third-party profiles. The llms.txt file on the new domain lists the facts and the pages; it is optional but costs nothing.
- **Measure it.** Five prompts a month in each engine (document 02, section 3); a wrong answer points to the profile that still needs fixing.

6. DISTRIBUTION

CHANNEL	ROLE	NOTE
Newsfile (TMX Newsfile)	Primary wire; feeds Yahoo Finance, TMX Money, Stockhouse, MarketScreener, Bloomberg terminals, Google News via its partner pages	Ticker in the header exactly '(TSXV: OCAL) (FSE: JC3)'; before 8:30 am ET where possible; investor URL at the foot; cost per release roughly $300 to $1,200 depending on circuit (third-party estimate; confirm with Newsfile)
SEDAR+	The filing of record	Same day as the wire
investors.ocal.ca	The permanent, structured copy	After the wire, never before
Email list	Direct to holders and prospects	Within the hour; release text only
LinkedIn company page	Amplification	Headline, one line, link; no commentary
Stockwatch	Fast Canadian pickup	Optionally email the PDF to news@stockwatch.com once public
Paid awareness, newsletters, influencers	Not until the operating metrics have been published for two periods, and then only labelled 'paid advertisement on behalf of OCAL Financial Inc.' under BC rules and TSXV Policy 3.4	Board decision; Signal is the IR firm of record

7. NINETY-DAY PLAN

WHEN	WHAT	OWNER
Go-live week	Domain, redirects, sitemaps, Search Console and Bing, IndexNow, GA4; rank snapshot day 0; Newsfile company page and ocalfinancial.ca About and llms.txt corrected	CQ, Has
Weeks 1 to 2	S&P Capital IQ, TMX Money, Stockhouse, Morningstar corrections sent; LinkedIn and Crunchbase updated; first release under the new workflow	Has, Shushu
Weeks 3 to 4	Google Finance feedback after upstream fixes; LEI address; rank snapshot day 30; Core Web Vitals field data check	Has, CQ
Weeks 5 to 8	Wikidata item with sources; first AI-answer check; explainer page themes drafted for Lawson review	Has, Matthew
Weeks 9 to 13	Rank snapshot day 60 and 90; report to Matthew: brand queries owned, vendor log, subscribers, downloads, calls booked; decide on explainer pages and on allowing or blocking training crawlers	Has
